Email: sravanthipallapu1990@gmail.com

Phone: +1 (669) 225-7823

Professional Summary

Senior Technical Lead Consultant with 12+ years of experience building scalable, high-performance web applications using React, Angular, and TypeScript. Strong experience in building scalable React-based applications with reusable components, performance optimization, and seamless API integrations in full stack environments. Strong expertise in developing enterprise-grade SPAs, micro-frontend architectures, and cloud-native applications on AWS and GCP. Experienced in integrating AI/GenAI solutions using OpenAI APIs, Lang Chain, and Vertex AI to deliver intelligent user experiences. Experience working as a Full Stack Developer with Angular frontend, Node.js middleware, and backend services using Spring Boot in enterprise applications. Strong experience in developing backend services using Node.js and Express.js for building scalable middleware and API-driven applications. Hands-on experience building AI-powered UI features using OpenAI, Vertex AI, and RAG-based architectures. Built accessible web applications compliant with ADA/WCAG accessibility standards. Proven ability to lead frontend development, optimize performance, and build secure, accessible (WCAG) applications. Skilled in REST/GraphQL integrations, state management (Redux, NgRx), and CI/CD pipelines. Extensive experience across healthcare, fintech, and enterprise platforms.

Technical Skills:

Frontend	React (v16+), Angular (v8–v17), TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, RxJS, NgRx, HTML5, CSS3, SCSS, Tailwind CSS / Bootstrap
Backend	Node.js, Express.js, Nextjs
CMS	Adobe Experience Manager (AEM), Drupal, Strapi (Headless CMS), Contentful
APIs	REST, GraphQL, WebSocket’s
Cloud	AWS (S3, Lambda, API Gateway, Cognito), GCP (Vertex AI, Pub/Sub), Azure
AI/GenAI	OpenAI APIs, Lang Chain, Llama Index, RAG Pipelines, Vertex AI
Tools	Webpack, Vite, Docker, Kubernetes, Jenkins, Cypress, Jest, Playwright
Databases	MongoDB, MySQL, PostgreSQL
Other	Micro Frontends, SPA, WCAG Accessibility, CI/CD, Agile/Scrum

Education

Master’s in Computer Science – Silicon Valley University (2016)
Bachelor’s in Information Technology – JNTU Hyderabad (2012)

Professional Experience

Client: BJC Healthcare
Role: Senior Lead Technical Consultant
Duration: Jan 2026 – Present

Project Description

Developing a healthcare digital platform for patient services and content management using React, Drupal, enabling dynamic content delivery and improved patient engagement.

Roles & Responsibilities

- Developed scalable and responsive healthcare web applications using React.js and TypeScript, ensuring high performance, accessibility, and seamless user experience across patient-facing and internal platforms
- Integrated Drupal and with React frontend to enable dynamic, API-driven content delivery and real-time content updates without requiring application redeployments
- Built reusable and modular UI components for patient portals, appointment scheduling, and healthcare dashboards, improving development efficiency and consistency

- Designed and implemented REST API integrations to securely exchange data between frontend applications and backend healthcare systems.
- Developed and maintained scalable React-based applications with focus on reusable components and modular architecture
- Developed backend middleware services using Node.js and Express.js to handle API orchestration, data transformation, and secure communication between frontend and backend systems
- Built RESTful APIs using Node.js to support healthcare workflows, including patient data processing, validation, and integration with external systems
- Collaborated with backend teams to integrate RESTful APIs and ensure seamless data flow across applications
- Optimized frontend performance using efficient rendering, memorization, and code-splitting techniques
- Ensured cross-browser compatibility and responsive design across multiple devices and screen sizes
- Developed UI components enabling user interaction and approval workflows for AI-driven processes.
- Took ownership of end-to-end UI delivery including design, development, and deployment.
- Contributed to building and maintaining a shared design system and reusable UI component library.
- Developed and customized content models to support structured and scalable healthcare content management workflows
- Implemented Redux for efficient state management to handle complex patient data flows and user interactions
- Ensured compliance with accessibility standards (WCAG) and healthcare data security requirements across UI components
- Built and maintained dynamic forms with validations, multi-step workflows, and seamless API integrations to support business and customer onboarding processes
- Designed reusable UI components for sales enablement tools and digital assets, ensuring consistency across multiple applications and platforms
- Collaborated with design and marketing teams to convert wireframes, mockups, and business requirements into responsive and user-friendly web interfaces
- Integrated CMS-driven content to enable real-time updates for marketing pages and promotional content without requiring code deployments
- Optimized application performance using lazy loading, code splitting, and efficient rendering techniques to reduce load time and improve responsiveness
- Collaborated with backend, CMS, and DevOps teams to deliver seamless integrations and scalable solutions in Agile environment
- Developed unit and integration tests using Jest and React Testing Library to maintain application stability and reliability
- Contributed to CI/CD pipelines enabling automated build, testing, and deployment processes

Environment: React.js, Node.js, Express.js, Spring Boot, TypeScript, Drupal, Redux, REST APIs, Jest, CI/CD, AWS, Agile

Client: MasterCard

Role: Lead Technical Consultant

Duration: Oct 2022 – July 2025

Project Description

Developed an enterprise reporting platform enabling users to generate and manage reports with real-time data processing and AI-powered insights.

Roles & Responsibilities

- Led development of enterprise-grade reporting platform using React, Angular, and TypeScript, supporting large-scale users with high performance and scalability
- Architected frontend solutions using Redux, MobX, and RxJS to manage complex application state and data flow efficiently.
- Explored server-side rendering concepts and performance optimization techniques for improving application load times and SEO
- Utilized Angular Signals and RxJS for efficient state management and reactive UI updates in complex applications.
- Developed AI-driven UI features enabling intelligent insights and data-driven decision-making.
- Built interactive dashboards to visualize AI-driven insights, including model outputs, reasoning flows, and real-time data processing.
- Designed and implemented secure payment workflow interfaces using OAuth2 and JWT-based authentication mechanisms.
- Led frontend architecture decisions and guided team on best practices for scalable UI development.
- Mentored junior developers and conducted design/code reviews to ensure high-quality delivery.

- Translated Figma designs, wireframes, and prototypes into responsive, production-ready UI components.
- Developed reusable and scalable UI components using Material UI and Angular Material to ensure consistency across applications
- Migrated legacy AngularJS applications to Angular 16+, significantly improving performance, maintainability, and user experience
- Integrated REST and GraphQL APIs with secure authentication and authorization layers for seamless backend communication
- Optimized application performance using lazy loading, code splitting, and advanced rendering strategies
- Built and maintained CI/CD pipelines using Jenkins and cloud platforms to automate deployments and improve release cycles
- Integrated AI-powered features using OpenAI APIs and Vertex AI to enhance reporting and decision-making capabilities
- Developed backend services using Node.js and AWS Lambda to support scalable and serverless architectures
- Monitored and improved application performance using logging and monitoring tools

Environment: React, Angular 16+, TypeScript, Node.js, AWS, GCP, GraphQL, Jenkins, Docker

Client: TD Ameritrade / Charles Schwab

Role: Senior UI Developer

Duration: Jan 2022 – Sep 2022

Project Description

Built financial dashboards and supported user migration to a unified investment platform with real-time data visualization.

Roles & Responsibilities

- Developed high-performance financial dashboards using React, Angular, and Redux, enabling real-time data visualization and enhanced user experience.
- Implemented real-time data streaming using Web Sockets and reactive programming patterns for dynamic UI updates.
- Implemented real-time data visualization components for financial analytics dashboards.
- Improved user experience by optimizing data rendering for high-frequency financial transactions.
- Integrated REST APIs and Firebase services to deliver real-time financial data updates
- Improved accessibility by implementing WCAG standards and ensuring compliance across UI components
- Implemented micro-frontend architecture using module federation for scalable and independently deployable UI modules.
- Optimized frontend performance using lazy loading, efficient rendering, and state management techniques
- Managed application state using Redux for handling complex financial data workflows
- Integrated Adobe Experience Manager (AEM) for dynamic content updates and content-driven UI rendering
- Developed interactive charts and data visualization components for financial insights
- Collaborated with backend and QA teams to ensure smooth integration and high-quality releases
- Automated build and deployment processes using CI/CD tools
- Supported large-scale user migration with minimal disruption and improved user engagement

Environment: React, Angular, Redux, Firebase, AEM, TypeScript, REST APIs

Client: Maritz

Role: Senior Technical Consultant

Duration: Aug 2021 – Dec 2021

Project Description

Developed an admin dashboard to manage customer and education data using React and Node.js.

Roles & Responsibilities

- Designed and developed admin dashboard applications using React, Redux, and Node.js to manage customer and educational data efficiently
- Designed admin workflows to streamline data management and improve operational efficiency.
- Integrated REST APIs CMS to enable dynamic content management and real-time data updates
- Designed frontend architecture aligned with enterprise standards for scalable application development
- Implemented form validations and dynamic UI behavior for enhanced user interactions
- Developed backend APIs to support seamless data flow between frontend and database systems
- Configured CI/CD pipelines using Jenkins to automate build and deployment processes
- Developed dynamic dashboards for tracking customer and educational data insights. Conducted performance tuning and resolved UI rendering issues
- Collaborated with cross-functional teams to ensure smooth project delivery
- Ensured code quality through peer reviews and adherence to coding standards
- Improved operational efficiency by streamlining admin workflows

Environment: React, Redux, Node.js, PostgreSQL, Jenkins, REST APIs

Client: Kaiser Permanente

Role: Senior Software Developer

Duration: May 2018 – Jul 2021

Project Description

Developed a healthcare member portal for managing coverage, claims, and patient interactions.

Roles & Responsibilities

- Developed healthcare applications using Angular, React, and Node.js to support patient services and member interactions
- Integrated Adobe Experience Manager (AEM) components and templates with Angular and React applications to deliver dynamic, personalized healthcare content experiences.
- Implemented and managed content models in Contentful, enabling scalable content delivery across web and mobile applications through REST and GraphQL APIs.
- Integrated Contentful with frontend applications, streamlining content authoring workflows and reducing deployment dependency for content updates.
- Collaborated with content authors and CMS teams to implement AEM-driven content management workflows, enabling seamless content updates without application redeployments.
- Built reusable UI components for claims, coverage, and healthcare workflows to ensure consistency and scalability
- Designed and implemented REST APIs for seamless communication between frontend and backend systems
- Implemented secure authentication mechanisms using JWT and AWS Cognito
- Optimized backend performance and database queries for improved system efficiency
- Developed secure healthcare workflows ensuring HIPAA-compliant data handling.
- Enhanced patient engagement through intuitive UI improvements and streamlined navigation.
- Enhanced application scalability and reliability through performance optimization techniques
- Integrated server-side rendering for improved application performance and SEO
- Conducted system testing and collaborated with QA teams for validation
- Modernized legacy components to improve user experience and maintainability
- Delivered user training and support for new system features
- Improved system usability and patient engagement through UI enhancements

Environment: Angular, React, Node.js, AWS, MongoDB, Jenkins

Client: Truist Financial

Role: Software Developer

Duration: Sep 2017 – Apr 2018

Project Description: Enhanced account opening application with improved UI, validation, and performance.

Roles & Responsibilities

- Integrated REST APIs to enable real-time data updates and backend communication
- Developed Angular-based user interfaces for account opening workflows with focus on usability and performance
- Built reusable UI components and custom directives to support scalable application development
- Optimized UI performance and responsiveness using efficient coding techniques
- Implemented form validations and interactive user input handling
- Conducted cross-browser compatibility testing to ensure consistent user experience
- Automated build processes using Grunt to improve development efficiency
- Enhanced accessibility and usability across application screens
- Collaborated with business stakeholders to gather and refine requirements
- Performed unit testing using Jasmine to ensure application quality

Environment: Angular, JavaScript, HTML5, CSS3, Grunt, REST APIs

Client: Cerner Corp

Role: Software Developer

Duration: Aug 2016 – Aug 2017

Project Description

Developed healthcare wellness application with personalized UI and optimized performance.

Roles & Responsibilities

- Developed healthcare wellness applications using React and Redux for personalized user experiences
 - Built reusable UI components to support scalable frontend development
 - Integrated MySQL database for efficient data storage and retrieval
 - Configured Webpack for optimized build and bundling processes
 - Implemented test-driven development using Jest for improved code quality
 - Optimized application performance using lazy loading techniques
 - Collaborated with UX teams to enhance user interface design
 - Identified and resolved bugs to improve system stability and reliability
-

InfoTech Solutions

Web Developer, Hyderabad, India

May 2012 – Dec 2014

Project: Web Application Development

Developed and maintained web applications, focusing on client-side presentation, data validation, and cross-browser compatibility using HTML, CSS, JavaScript, and jQuery.

- Created prototypes and demos, presenting them to clients to ensure alignment with requirements.
- Optimized images using Adobe Photoshop, reducing page load times.
- Designed and maintained responsive page layouts, improving navigation and user experience.
- Conducted user research with team members, enhancing interface usability through feedback.
- Developed MySQL database tables and manipulated data for efficient storage and retrieval.
- Implemented JSON for data storage and search function ability, improving data access speed.
- Built modules with AJAX and jQuery for dynamic data retrieval, enhancing interactivity.
- Utilized XML for transferring administrative data to backend systems, ensuring seamless integration.
- Applied jQuery validation plugins for robust client-side form validation, reducing errors.
- Resolved cross-browser compatibility issues, ensuring consistent performance across IE, Chrome, Firefox, Safari, and Opera.
